

## HOW TO MEASURE FOR RECTANGULAR TRAMPOLINE PADS

Fill in the blanks: Measure the length and width of the bed. Measure distance of springs from edge of the bed to inside of frame. Measure edge of bed to outside of frame. Does your frame have *straight sides* (left view) or *V out sides* (right view), circle one. Does your frame have *straight ends* (top view) or *V out ends* (bottom view), circle one.

We have two styles of pads, **FRAME PAD** – this covers the frame and a little of the spring, approx. 9" wide, **FULL PAD** – this covers the frame and the spring (excluding the corner). If your frame has V out supports like on the right and bottom the pads will be tapered to fit.

If your pads are not a stock item we can make special pads, contact us so we can tell you what information we need.
